Connecticut and US Vaccination Summary

Connecticut (as of Tuesday March 30, 2021)	Cumulative	Daily
Doses Delivered	2,322,415	49,509
Doses Administered	1,924,605	35,386
Percent of Population Who Have Completed Vaccination	20.00%	
Connecticut Rank Among 50 States and DC	6	
Percent of Population Who Have Initiated Vaccination	34.90%	
Connecticut Rank Among 50 States and DC	2	
United States (as of Tuesday March 30, 2021)	Cumulative	Daily
Doses Delivered	189,451,285	3,592,927
Doses Administered	147,602,345	2,769,331
Percent of Population Who Have Completed Vaccination	16.14%	
Percent of Population Who Have Initiated Vaccination	29.02%

CDC Weekly Allocations for Connecticut

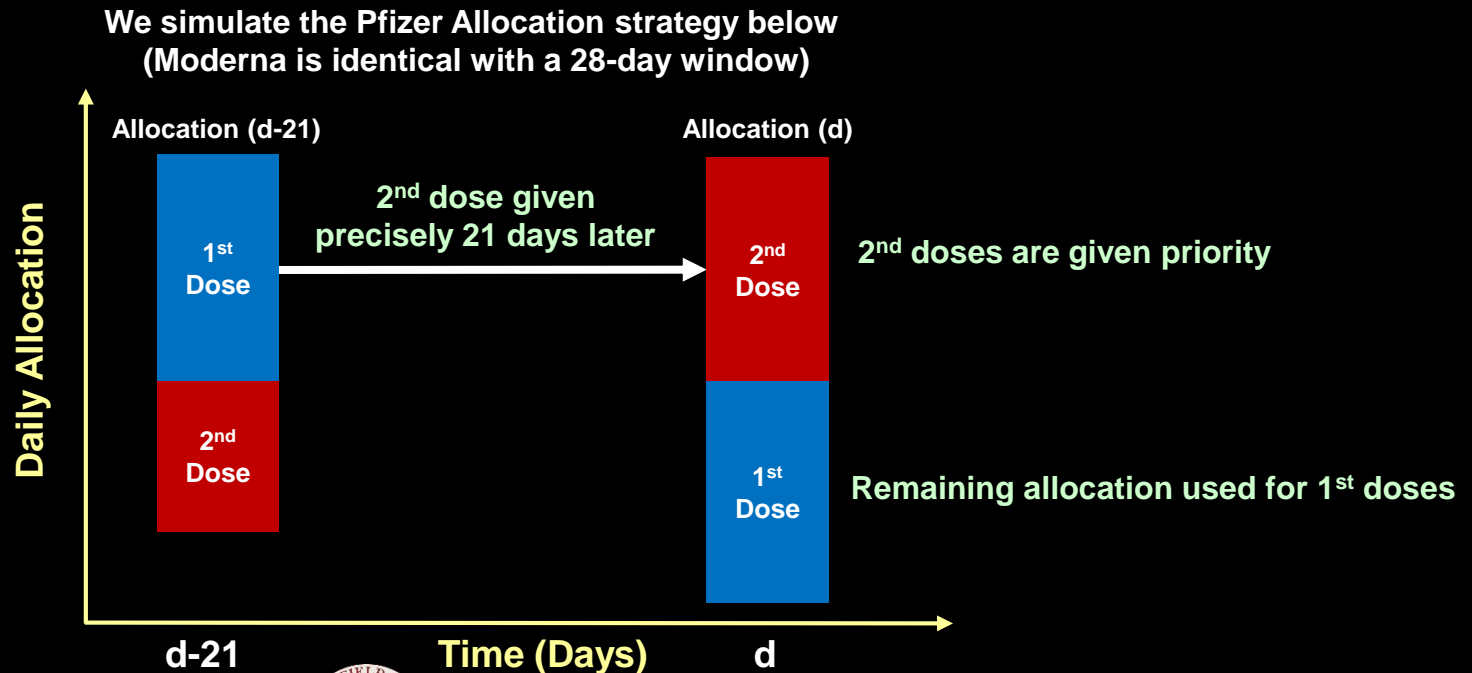

Connecticut New Cases in Age 70+ are decreasing rapidly ... this appears to be due to increased vaccinations

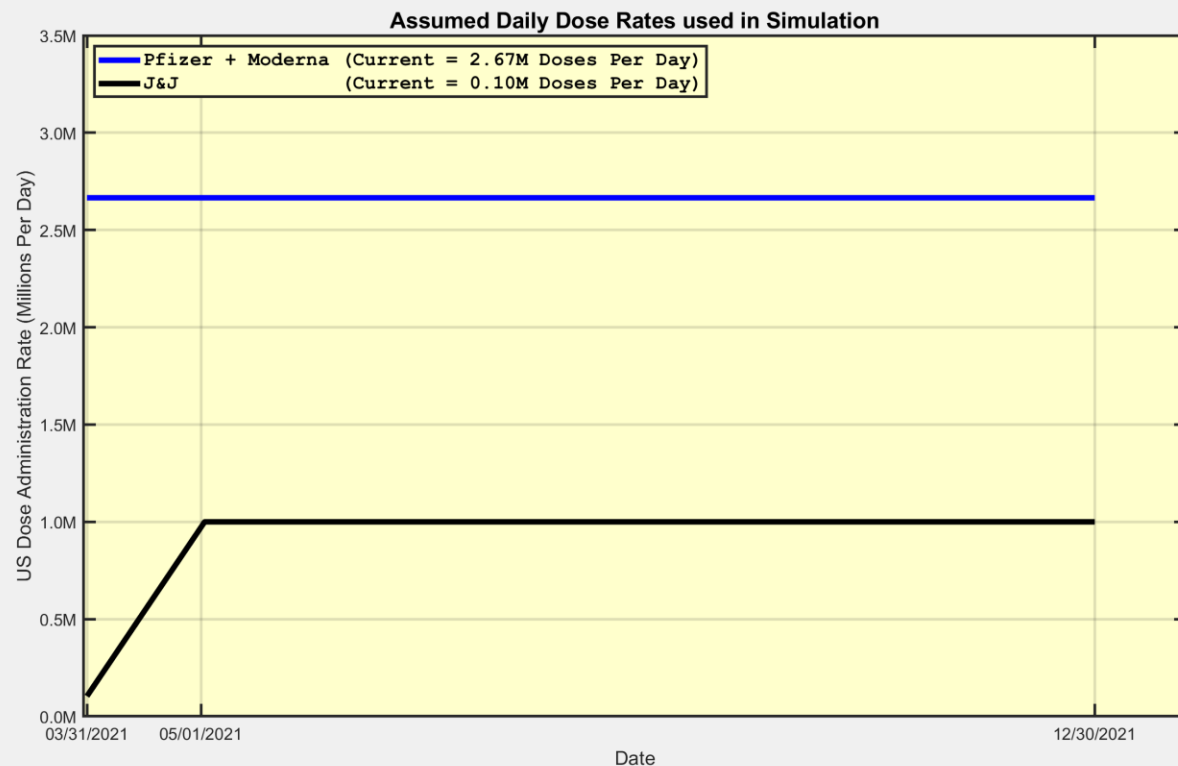

Simulation of Herd Immunity: Assumptions

1. Herd Immunity is achieved when 75% of the US population is fully vaccinated.
2. We replicate known history up to the first day of the simulation.
3. *We do not assume that people previously testing positive are immune ... they are still vaccinated.*
4. All residents eligible for their 2nd dose (21 or 28 days after 1st dose) will *receive it on the required day.*
5. Doses remaining after administering *all required 2nd doses are administered as 1st doses.*
6. Hence, we assume sufficient capacity to *administer all allocated doses without any delay or disposal.*
7. *We ignore potential 'vaccine hesitancy', i.e., we assume everyone eligible for vaccination takes it.*

Simulation of Herd Immunity: Assumed Dose Rates

1. The US Pfizer + Moderna dose rates remain at current levels
2. The Johnson & Johnson dose rate ramps up from current level to 1M doses per day on May 1

Simulation of Herd Immunity

NOTE: This is a computer simulation based on assumptions that will likely change in the future.
