Connecticut and US Vaccination Summary

Connecticut (as of Thursday April 01, 2021)	Cumulative	Daily
Doses Delivered	2,484,595	55,349
Doses Administered	1,992,899	36,534
Percent of Population Who Have Completed Vaccination	20.86%	
Connecticut Rank Among 50 States and DC	5	
Percent of Population Who Have Initiated Vaccination	36.02%	
Connecticut Rank Among 50 States and DC	3	

United States (as of Thursday April 01, 2021)	Cumulative	Daily
Doses Delivered	200,496,635	3,853,043
Doses Administered	153,631,404	2,903,730
Percent of Population Who Have Completed Vaccination	16.95%	
Percent of Population Who Have Initiated Vaccination	30.08%

CDC Weekly Allocations for Connecticut

Connecticut New Cases in Age 70+ are decreasing rapidly ... this appears to be due to increased vaccinations

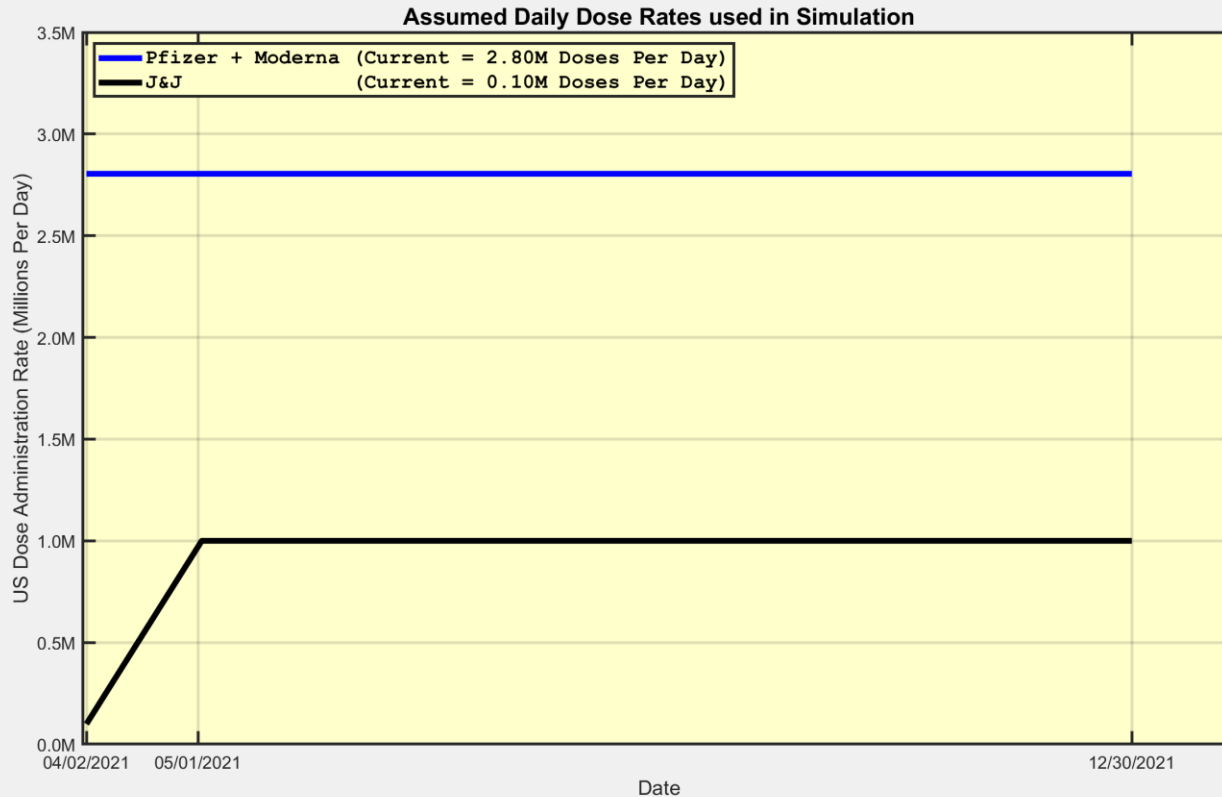

Simulation of Herd Immunity: Assumptions

1. Herd Immunity is achieved when 75% of the US population is fully vaccinated.
2. We replicate known history up to the first day of the simulation.
3. *We do not assume that people previously testing positive are immune ... they are still vaccinated.*
4. All residents eligible for their 2nd dose (21 or 28 days after 1st dose) will *receive it on the required day.*
5. Doses remaining after administering *all required 2nd doses are administered as 1st doses.*
6. Hence, we assume sufficient capacity to *administer all allocated doses without any delay or disposal.*
7. *We ignore potential 'vaccine hesitancy', i.e., we assume everyone eligible for vaccination takes it.*

Simulation of Herd Immunity: Assumed Dose Rates

1. The US Pfizer + Moderna dose rates remain at current levels
2. The Johnson & Johnson dose rate ramps up from current level to 1M doses per day on May 1

Simulation of Herd Immunity

NOTE: This is a computer simulation based on assumptions that will likely change in the future.
